BARRY CONTROLS 7350721 SERIES ENGINE ISOLATORS

Twin Otter Engine Isolator Support

AEK Technology is equipped to support your requirements for most DHC-6 Twin Otter PT-6 engine installations using Barry Controls 7350721 series engine isolators and isolator components, including factory new and factory rebuilt parts. Our sales staff can match your aircraft and 7350721 dash number to our stock.

Barry Controls' 735021 Series Engine Vibration Isolator is designed expressly for the DHC-6 Twin Otter's PT-6 engine installations. See the following list for your aircraft type part number.

AEK has the largest inventory of DHC-6 engine vibration isolators in stock and carries other Barry Controls engine isolators and isolator components for piston, turboprop and jet aircraft.

Partial list of aircraft using 735021 series isolators:

DHC-2 Mark III Turbo Beaver (re-engine)
DHC-6 Twin Otter 100
DHC-6 Twin Otter 200
DHC-6 Twin Otter 300

TYPICAL 735021 ENGINE ISOLATOR

We also stock factory rebuilt isolators and factory new isolator components for field overhauls and rebuilds.

AEK Technology also stocks many of the AN, MS and NAS hardware items used in aerospace and defense applications such as fasteners, fittings and avionics box to tray retainers.
